HOW TO EXTRACT IMAGES FROM A PDF WITH PREVIEW

1. Open the PDF in **Preview**.

2. Make sure the "Sidebar" is displayed and the "Thumbnail" view has been selected. If the "Sidebar" is not displaying, go to the **View** menu and select **Thumbnails**.

3. In the "Sidebar" click on the page to be saved as a jpeg, go to the **File** menu and select **Export As…** (or **Export…**).

4. In the "Export As:" field, enter in a unique filename.

5. In the "Where:" dropdown menu select the location to save the extracted page.

6. Change the "Format" dropdown menu to **JPEG** and move the "Quality" slider to **Best**.

7. Click **Save**.

8. Once the image has been saved, open it up again in preview and crop as needed.

9. Repeat process for additional pages.
